Manage import product report that provides the specifications

Manage the export product report.

Manage other collection and classification reports that collect the administration information, statistic the business results (sell summation in product order, customer order, product-customer order, VAT bill related cost, business activity, business fund, general import order)

## Other features of BMS:

1. Enhanced features of BMS:

Integrate module to sending customer messages

Use point card, member card that help the solution for regular customer service

2. Bill- and product code-printing technology:

Use Laser printing technology

Associate Prices with Your Barcodes

Use bill printing technology

Detect 2D product code and 3D matrix code

3. Technological customer messages:

Send direct messages

Use product code specialization printing technology

Use bill printing technology

4. Data security:

Classify decentralization user in function order

Use specialize product code printing technology

Decentralize product code specialization printing technology

***Build the conceptual model for the above system.***
