

Course: Web Application Development

Lab Instructor: Vo Duy Khoi, MSc.

Email: khoivd@hcmiu.edu.vn

Web Resources: <http://125.234.238.107/web/web-application-development>

Lab 1: Setup Environment & Implement a Website

Content:

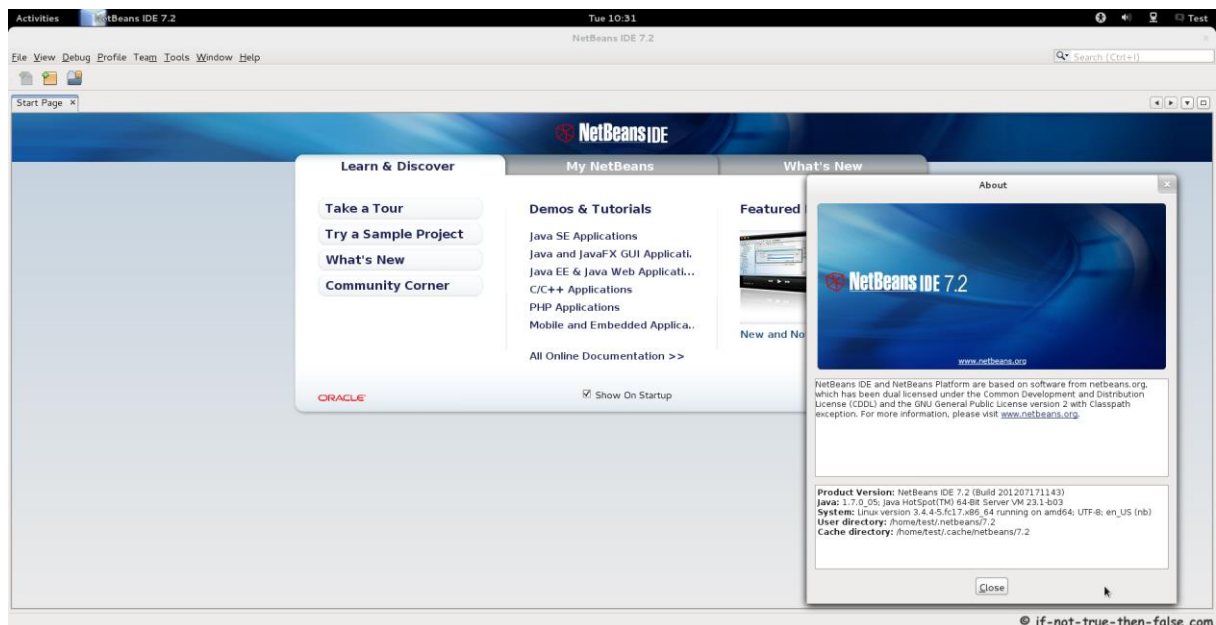

- Setup IDE: NetBeans
- Setup database: MySQL (database server), Navicat Light(administration tool)
- Implement a website using HTML

Duration: 3 hours

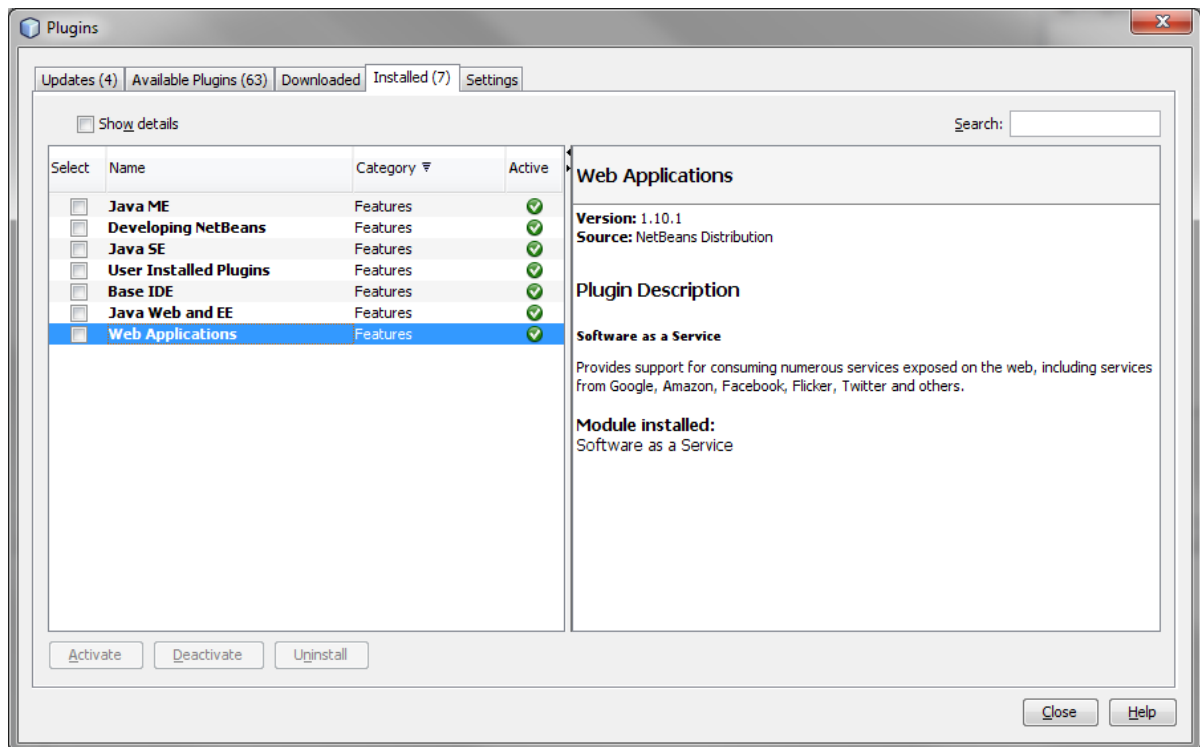

Part 1: Setup NetBeans IDE

The source program copy from Instructor, you can go to this website: www.netbeans.org/ to have an overview of Netbeans or download the last version.

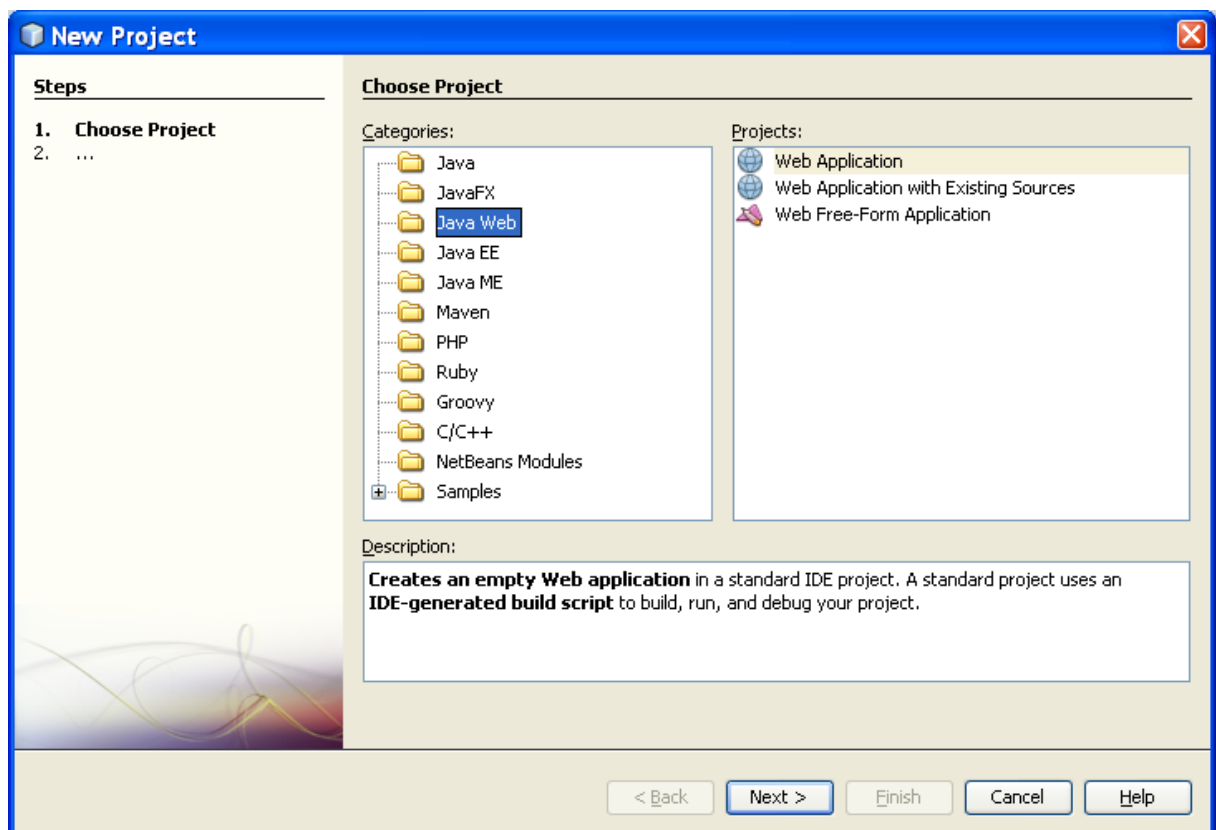

This is the sample Interface when finish installation:

Create a website to test Netbeans environment: Select File > New Project > Java Web > Web Application: If Web Application project template does not exist, that means Web Applications plugin is not installed. You can install it by choosing Tool>Plugin>Available Plugin then choose Web Applications

Screen of plugin installation

Click to “Next”, then fill in the Project Name; Name and Location, then go to Next button.

New Web Application

Steps

1. Choose Project
2. **Name and Location**
3. Server and Settings
4. Frameworks

Name and Location

Project Name:

Project Location:

Project Folder:

☐ Use Dedicated Folder for Storing Libraries

Libraries Folder:

Different users and projects can share the same compilation libraries
(see Help for details).

☐ Set as Main Project

< Back Next > Finish Cancel Help

Choose the web server (there are two web server: Apache Tomcat & GlassFishV2)

New Web Application

Steps

1. Choose Project
2. Name and Location
3. **Server and Settings**
4. Frameworks

Server and Settings

Add to Enterprise Application:

Server:

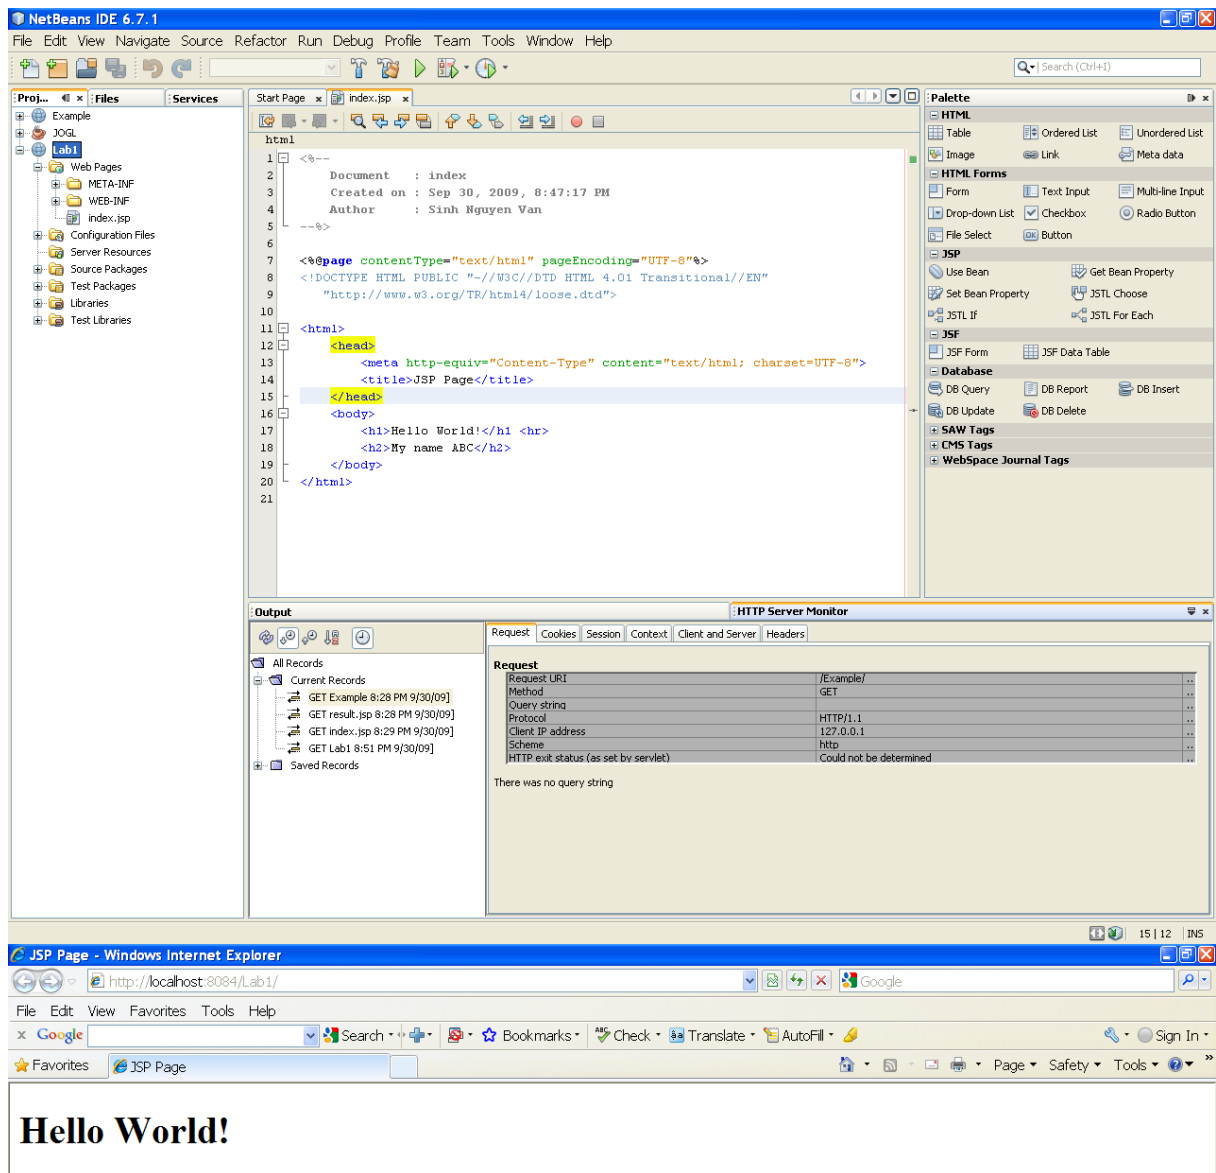

☐ Use dedicated library folder for server JAR files

Java EE Version:

Context Path:

< Back Next > Finish Cancel Help

Now click Finish button to complete an example of web application.

Part 2: Setup MySQL (Database System) and Navicat Light (Tool)

In this Lab, we will install MySQL version 6.0 (source program refer from Instructor). MySQL can be controlled by two administration interfaces:

- Console (built-in console)
- Graphic User Interface (Third-Party Tools)

Third-party tools are softwares provided by many vendors, such as MySQL GUI, Navicat,... You can install Navicat Lite for MySQL. In this section, you will learn console and Navicat

a. MySQL console

Steps to launch console:

- Open window console by run "cmd" command on "Start" menu
- Locate directory contained file "mysql" (it is usually located in bin folder of installed folder). Do not forget your username and password of mysql when you was installing.
- Run mysql as figure bellow

```
C:\WINDOWS\system32\cmd.exe - mysql -u root -p

C:\Program Files\MySQL\MySQL Server 6.0\bin>mysql root -p
Enter password:
ERROR 1044 (42000): Access denied for user ''@'localhost' to database 'root'

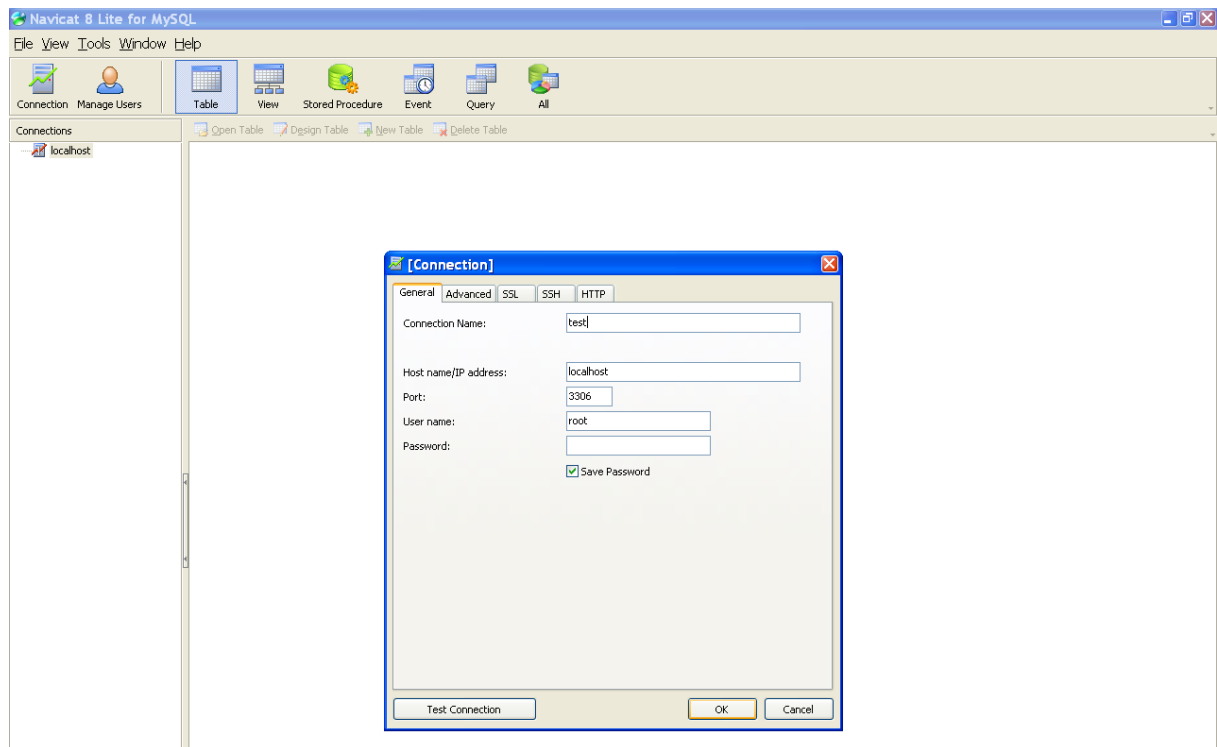

C:\Program Files\MySQL\MySQL Server 6.0\bin>mysql -u root -p
Enter password:
Welcome to the MySQL monitor.  Commands end with ; or \g.
Your MySQL connection id is 4
Server version: 6.0.3-alpha-community MySQL Community Server (GPL)

Type 'help;' or '\h' for help. Type '\c' to clear the buffer.

mysql> shows databases;
ERROR 1064 (42000): You have an error in your SQL syntax; check the manual that
corresponds to your MySQL server version for the right syntax to use near 'shows
databases' at line 1
mysql> show databases;
+-----+
| Database |
+-----+
| information_schema |
| funtasybook |
| mysql |
| student |
| test |
| weblab5 |
| webtest |
+-----+
7 rows in set (0.24 sec)

mysql> _
```

- After connected to database, you can test MySQL feature by typing something. The syntax and purposes of command can be found on internet.
- b. Navicat (Trial version)
 - Install it on your computer
 - Connect to database, using same information as console. But you can type them on graphic user interface now.
 - Test Navicat features with your mouse.

Part 3: Design your personal website using HTML

In this part, you will learn how to create a new web project using NetBeans. You also learn how to modify the web application deployment descriptor. Then, you can start using the lab sample web application.
